علم وخبرة

Assumptions and conditions of the report Valie for valuation and real estate valuation are committed to the confidentiality of the information contained in the report.

This valuation is an estimate of the real estate market price in normal conditions

The report was prepared for the purpose of the client and the users of the report and may not be used except for the purpose for which it was prepared and should not be distributed, published or part of it in any document, statement, circular or in any means of communication except after obtaining the written consent of Valie for valuation and real estate valuation, and we authorize the fund manager to publish this report on his website as well as on the Tadawul website and on the website of the Saudi Capital Market Authority, and we do not accept any responsibility whatsoever before any other party.

The property was ostensibly inspected, it was not structurally detected, and no apparent defects were observed unless they were mentioned in the report

Valie for valuation and real estate valuation has no responsibility to verify the integrity of the documents related to this property, and it has been assumed that the attached documents are correct and free from any legal obligations or any obstacles unless they are mentioned in the documents or authorized by the appraisal applicant. The company also does not acknowledge the accuracy or completeness of the available data and does not express its opinion No guarantees of any kind are made for the accuracy or completeness of the data except as clearly indicated in this report

This evaluation is valid for three months from the date of preparing this report

In preparing this report, we relied on the information provided to us by the client and assumed that it was correct and we relied on it to reach the outputs of this report. We also relied on a package of information and data about the company and from previous evaluation work and the company's continuous field survey, which we believe, to the best of our knowledge, are correct.

The type of report submitted is a brief report on all evaluation work, explaining the methods used to arrive at the value

The assessment was carried out according to international standards issued by the Saudi Authority for Accredited Valuers in 2020.

The currency used in the report is the Saudi Riyal

علم وخبرة

Scope of work

The property was disclosed by the Vale team and its partner for valuation and real estate valuation on 2021/06/21 AD

Based on the scope of work and market analysis, appropriate evaluation methods are identified and all assumptions and inputs are made to perform financial calculations to reach market value according to the methods chosen.

Information on the property was collected from the site and the prices of land and properties for sale were analyzed to reach the market value of the property

The price level of properties in the area and surrounding the property was studied and the current prices exposed to these properties were utilized, and a field survey and a survey of the recent sale prices of plots of land and real estate in the area were taken, and then these prices were taken as indicators of value

The evaluation report is prepared according to the scope of the work to include the data, results and outputs reached

We assumed that the property under evaluation received the benefits of all services and facilities, that all units of the property were fully covered, and that we had no responsibility for it if otherwise.

Our assessment and report are prepared for use by the customer for the purpose of knowing the market value of the asset within the disclosed purpose, and our commitment to this directive is limited to the fee due for this work and no obligation can be accepted to any party or use our assessment and report for any other

Definition of market value

(according to international standards issued by the Saudi Authority for Accredited Valuers in 2020)

It is the estimated amount by which assets or liabilities are exchanged on the valuation date between a willing buyer and a willing seller in a transaction between independent parties of interest, after adequate marketing and in which the parties disposed of on the basis of knowledge and prudence without compulsion.

Declaration

We here by Valie for valuation and real estate valuation company, confirm that we are complying with the Accredited Valuers Law and its Implementing Regulations, and any other Regulations issued by the Saudi Authority for Accredited Valuers (TAQEEM) and that the scope of the valuation reports is appropriate for the purpose of the fund manager's request

Evaluation in Uncertainty In March 2020, the World Health Organization classified the emerging coronavirus (COVID-19) as a (pandemic), which had a clear impact on global and local economies and financial markets.

Accordingly, many official measures were taken locally and internationally, which would affect all sectors, including the real estate sector.

During this critical period, there is a clear impact on real estate transactions and market activity, and since the valuation date falls within it, we should take into account the lack of sufficient evidence to base them on as comparisons in the current period, in order to reach the final value, and in fact, the current conditions are under The impact of the pandemic means that we are facing an exceptional situation in which it is difficult to make an accurate judgment of the state of the market and the value of real estate.

Accordingly, the value on which we based our professional opinion will be on the basis of (Evaluation in Uncertainty) as defined by the International Evaluation Standards Board, in the technical information paper entitled (Evaluation in Uncertainty), which was issued in 2013.

The impact of the Corona crisis on the real estate market

The real estate market at the beginning of this year and in continuation of what happened during the past two years has gone through a slow upward wave and the movement of selling and renting is good due to its occurrence after declines and fluctuations that occurred during the previous years in the residential and commercial sectors.

In light of the current conditions, there are some factors that we believe will directly affect the real estate market situation in the coming period, and they are as follows:

- Corona crisis.
- The decision to raise value-added tax.
- Weakness or rationing of government spending.
- Reducing rented spaces and activating remote work.
- Some tenants fail to pay the outstanding rents.

Evaluation methods:

Similar sales method (comparison method):

This method uses indicators of value by comparing the valued asset with identical or similar assets whose prices are available. According to this method, the first step is to study the transaction prices of identical or similar assets that took place recently in the market. Few, it is also better to study the prices of identical or similar assets listed or offered for sale provided that this information is clear and analyzed objectively, and the information related to the prices of those transactions must be modified to show the differences in the terms and conditions of the actual transaction, the basis of value and assumptions that are adopted in the evaluation process There may also be differences in the legal, economic and physical characteristics of other transaction assets compared to the asset being valued.

Income Return Calculation Method (Income Capitalization):

This method uses the income generated by the property as a basis for valuation, and the income capitalization method depends on estimating the value of real estate according to the simulation of real estate market sales of properties with stable income similar to the property under evaluation. The basic condition for applying the income capitalization method is to anticipate the stability of income and growth in the property in the future.

There are several methods for calculating the income return, such as:

- · Direct capitalization method.
- Discounted Cash Flow Method (DCF)
- The total income multiplier method.

Cost Method (Depreciation Cost Calculation):

This method is used to determine the cost of constructing the property and provides indicators of the value. The value is based on the construction costs and deducting the depreciation percentage from it, if any, in addition to the value of the land.

The cost method is sometimes referred to as the contractor method, and the cost method determines the value by estimating the cost of acquiring the land and building a new property with equal benefits or modifying an old property for the same use without any unnecessary expenses resulting from the delay.

The cost of the land is then collected on the total construction cost, and it is customary to add the project incentives or the real estate developer's profits/losses to the construction costs if appropriate.

Factors Affecting Demand:

- Real estate prices in the city of Dammam.
- Availability of infrastructure and superstructure services such as schools, hospitals, parks, and others.
- Urban style in the surrounding area.
- Building system in the real estate area.

Risks about the property:

- A general decline in real estate prices in the city of Dammam as a result of multiple variables.
- The emergence of new legislation and regulations that limit the urban movement.
- Operation and maintenance expenses of the property.
- The solvency of the tenants.
- Infrastructure projects are incomplete in the region.
- The emergence of price competition in similar projects.

Comparisons and adjustment factors:

Land prices affect the development of the real estate site and the various uses of the land, as it is considered one of the main factors in determining the annual financial return for various uses. It also affects many other urban planning aspects such as building regulations and the building heights and setbacks it includes.

After the field survey in the site to be evaluated, the prices in the area are as follows:

	Comparisons and Adjustment Factors										
Comparison No.	comparison site	property type	Using	streets	Nature of the land	Date	Area (Sqm)	property value	square meter price	net settleme nt	Price per meter after settlement
1	Al-fisaliah	Land	commercial	3	Flat	more than 3 months	3,920	18,032,000	4,600	-30%	מר כ

3	settlement ratio	0%	0%	-10%	0%	0%	-15%	0%	-	-	3,188

Average price per square meter	3,143.33
Price per square meter after rounding	3,150

Comparison data source: Ministry of Justice indicators, real estate brokers and real estate websites.

Comparisons:

After analyzing, studying and comparing the comparisons with the site to be evaluated, the average prices in the region are as follows:

Statement	Average price (SR/sqm)	Notes
commercial land	3,400 – 3,000	For spaces above 50,000 square meters
Showroom	900-700	Inside the malls

Comparison data source: Ministry of Justice indicators, real estate brokers and real estate websites.

Calculations and pointers to value:

The value of the property by calculating the value of the land and buildings "cost calculation method":

Statement	Area (square meter)
Land area	57,215.32
basement area	26,474
Building area	35,524
Price per square meter of land	3,150
basement price per square meter	2,200
Building price per square meter	2,000
age of buildings	4
Price per square meter for the basement (after deducting depreciation)	1,980
Building price per square meter (after deducting depreciation)	1,800
total land value	180,228,258
Total value of the basement	52,418,520
Total Building Value	63,943,200
Total property value at cost	296,589,978

- The area of the land was calculated based on the attached instrument.
- The building areas were calculated according to the attached building permit.

Calculations and pointers to value:

The value of the property by calculating the income return "income capitalization method":

Gross annual income (before deduction of occupancy rate)	24,750,000
Average annual occupancy rate	0.0%
Total annual income (after deducting occupancy rate)	24,750,000
Management, operation and maintenance expenses (0%) of the total income (after deducting the occupancy rate)	0
net income of the property	24,750,000
Income capitalization factor	% 8
The value of the property using the method of calculating the return on income	309,375,000

- The total real estate income was calculated according to the field survey that was conducted on similar properties, noting that the rental value according to the contracts attached by the client is close to the rental price in the current situation of the real estate market (contract value 24,720,000 riyals / year).
- The capitalization factor was calculated after analyzing the market risks and available options and studying the percentage of returns for similar projects, which ranges from 7% to 9%.
- Operation and maintenance expenses according to the attached contract shall be borne by the lessee.

Estimating the market value of the property:

When reviewing the previous information from this report and analyzing the current real estate market data, we estimate the market value of the property (Investment Method) on 06/30/2020 AD, and its current status according to the following table:

The final value of the property			
Property value (number)	309,375,000 SAR		
Property value (written)	Three hundred and nine million three hundred and seventy-five thousand Saudi riyals

Factors Affecting Demand:

- Real estate prices in the city of Jeddah.
- Availability of infrastructure and superstructure services such as schools, hospitals, parks, and others.
- Urban style in the surrounding area.
- Building system in the real estate area.

Risks about the property:

- A general decline in real estate prices in the city of Jeddah as a result of multiple variables.
- The emergence of new legislation and regulations that limit the urban movement.
- Operation and maintenance expenses of the property.
- The solvency of the tenants.
- Infrastructure projects are incomplete in the region.
- The emergence of price competition in similar projects.

Comparisons and adjustment factors:

Land prices affect the development of the real estate site and the various uses of the land, as it is considered one of the main factors in determining the annual financial return for various uses. It also affects many other urban planning aspects such as building regulations and the building heights and setbacks it includes.

After the field survey in the site to be evaluated, the prices in the area are as follows:

	Comparisons and Adjustment Factors										
Comparison No.	comparison site	property type	Using	streets	Nature of the land	Date	Area (Sqm)	property value	square meter price	net settleme nt	Price per meter after settlement
1	Al-Zahra	Land	commercial	2	Flat	less than 3 months	1,050	18,999,750	18,095	-10%	16 206

3	settlement ratio	0%	0%	0%	0%	0%	-10%	0%	-	-	14,850

Average price per square meter	15,778.50
Price per square meter after rounding	15,800

Comparison data source: Ministry of Justice indicators, real estate brokers and real estate websites.

Comparisons:

After analyzing, studying and comparing the comparisons with the site to be evaluated, the average prices in the region are as follows:

Statement	Average price (SR/sqm)	Notes
commercial land	16,000 – 15,000	Prince Sultan Road
Showroom	1,800-1,600	-
offices	850-650	-

Comparison data source: Ministry of Justice indicators, real estate brokers and real estate websites.

Calculations and pointers to value:

The value of the property by calculating the value of the land and buildings "cost calculation method":

Statement	Area (square meter)
Land area	4,761.50
basement area	2,935
Building area	12,131.40
Price per square meter of land	15,800
basement price per square meter	2,200.00
Building price per square meter	2,500.00
age of buildings	15.00
Price per square meter for the basement (after deducting depreciation)	1,375.00
Building price per square meter (after deducting depreciation)	1,562.50
total land value	75,231,700
Total value of the basement	4,035,625
Total Building Value	18,955,313
Total property value at cost	98,222,638

- The area of the land was calculated based on the attached instrument.
- The building areas were calculated according to the attached building permit.

Calculations and pointers to value:

The value of the property by calculating the income return "income capitalization method":

Gross annual income (before deduction of occupancy rate)	10,000,000
Average annual occupancy rate	0%
Total annual income (after deducting occupancy rate)	10,000,000
Management, operation and maintenance expenses (0%) of the total income (after deducting the occupancy rate)	0
net income of the property	10,000,000
Income capitalization factor	8%
The value of the property using the method of calculating the return on income	125,000,000

- The total real estate income was calculated according to the field survey that was conducted on similar properties, noting that the rental value according to the contracts attached by the client is close to the rental price in the current situation of the real estate market (contract value 24,720,000 riyals / year).
- The capitalization factor was calculated after analyzing the market risks and available options and studying the percentage of returns for similar projects, which ranges from 7% to 9%.
- Operation and maintenance expenses according to the attached contract shall be borne by the lessee.

Estimating the market value of the property:

When reviewing the previous information from this report and analyzing the current real estate market data, we estimate the market value of the property (Investment Method) on 06/30/2020 AD, and its current status according to the following table:

The final value of the property				
Property value (number)	125,000,000 SAR			
Property value (written)	One hundred and twenty-five million Saudi riyals			

	Property data summary

Factors Affecting Demand:

- Real estate prices in the city of Riyadh.
- Availability of infrastructure and superstructure services such as schools, hospitals, parks, and others.
- Urban style in the surrounding area.
- Building system in the real estate area.

Risks about the property:

- A general decline in real estate prices in the city of Riyadh as a result of multiple variables.
- The emergence of new legislation and regulations that limit the urban movement.
- Operation and maintenance expenses of the property.
- The solvency of the tenants.
- Infrastructure projects are incomplete in the region.
- The emergence of price competition in similar projects.

Comparisons and adjustment factors: (industrial commercial land)

Land prices affect the development of the real estate site and the various uses of the land, as it is considered one of the main factors in determining the annual financial return for various uses. It also affects many other urban planning aspects such as building regulations and the building heights and setbacks it includes.

After the field survey in the site to be evaluated, the prices in the area are as follows:

Comparisons and Adjustment Factors											
Comparison No.	comparison site p	property type	Using	streets	Nature of the land	Date	Area (Sqm)	property value	square meter price	net settlement	Price per meter after settlement
1	Al-fisaliah	Land	industrial commercial	3	Flat	less than 3 months	1,542	2,235,900	1,450	5%	1,523
	settlement ratio	0%	0%	0%	0%	0%	5%	0%	-	-	
2	Al-fisaliah	Land	industrial commercial	3	Flat	less than 3 months	4,627	7,171,850	1,550	0%	1,550
	settlement ratio	0%	0%	0%	0%	0%	0%	0%	-	-

3	settlement ratio	0%	0%	0%	0%	0%	5%	0%	-	-	1,470

Average price per square meter	1,514.17
Price per square meter after rounding	1,525

Comparison data source: Ministry of Justice indicators, real estate brokers and real estate websites.

Comparisons:

After analyzing, studying and comparing the comparisons with the site to be evaluated, the average prices in the region are as follows:

Statement	Average price (SR/sqm)	Notes
Industrial land	1,600 – 1,300	-
Warehouses and workshops	275 – 175	For spaces less than 5,000 square meters
Warehouses and workshops	225 – 150	For spaces above 5,000 square meters
Showroom and halls	600 - 500	-

Comparison data source: Ministry of Justice indicators, real estate brokers and real estate websites.

Calculations and pointers to value:

The value of the property by calculating the value of the land and buildings "cost calculation method":

Statement	Area (square meter)
Land area	6,729.88
Building area	5,233.00
Price per square meter of land	1,525
Building price per square meter	900
age of buildings	9
Building price per square meter (after deducting depreciation)	697.50
total land value	10,263,067
Total Building Value	3,650,018
Total property value at cost	13,913,085

- The area of the land was calculated based on the attached instrument.
- The building areas were calculated according to the attached building permit.

Calculations and pointers to value:

The value of the property by calculating the income return "income capitalization method":

Gross annual income (before deduction of occupancy rate)	960,000
Average annual occupancy rate	0%
Total annual income (after deducting occupancy rate)	960,000
Management, operation and maintenance expenses (0%) of the total income (after deducting the occupancy rate)	0
net income of the property	960,000
Income capitalization factor	7.75%
The value of the property using the method of calculating the return on income	12,387,097

- The total real estate income was calculated according to the field survey that was conducted on similar properties, knowing that the rental value according to the contracts attached by the client is close to the rental price in the current situation of the real estate market.
- The capitalization factor was calculated after analyzing the market risks and available options and studying the percentage of returns for similar projects, which ranges from 7.25% to 8.25%.
- Operation and maintenance expenses according to the attached contract shall be borne by the lessee.

Estimating the market value of the property:

When reviewing the previous information from this report and analyzing the current real estate market data, we estimate the market value of the property (Investment Method) on 06/30/2020 AD, and its current status according to the following table:

The final value of the property			
Property value (number)	12,387,097 SAR		
Property value (written)	Twelve million three hundred and eighty-seven thousand and ninety-seven Saudi riyals

Factors Affecting Demand:

- Real estate prices in the city of Riyadh.
- Availability of infrastructure and superstructure services such as schools, hospitals, parks, and others.
- Urban style in the surrounding area.
- Building system in the real estate area.

Risks about the property:

- A general decline in real estate prices in the city of Riyadh as a result of multiple variables.
- The emergence of new legislation and regulations that limit the urban movement.
- Operation and maintenance expenses of the property.
- The solvency of the tenants.
- Infrastructure projects are incomplete in the region.
- The emergence of price competition in similar projects.

Comparisons and adjustment factors:

Land prices affect the development of the real estate site and the various uses of the land, as it is considered one of the main factors in determining the annual financial return for various uses. It also affects many other urban planning aspects such as building regulations and the building heights and setbacks it includes.

After the field survey in the site to be evaluated, the prices in the area are as follows:

Comparisons and Adjustment Factors											
Comparison No.	comparison site p	property type	Using	streets	Nature of the land	Date	Area (Sqm)	property value	square meter price	net settlement	Price per meter after settlement
1	Yasmeen	Land	residential commercial	2	Flat	less than 3 months	2,520	10,080,000	4,000	5%	4,200
	settlement ratio	0%	0%	5%	0%	0%	0%	0%	-	-

	settlement ratio	0%	0%	5%	0%	0%	0%	0%	-	-	ŕ
3	Yasmeen	Land	residential commercial	3	Flat	less than 3 months	3,660	14,640,000	4,000	-5%	3,800
ر	settlement ratio	0%	0%	0%	0%	0%	-5%	0%	-	-	3,000

Average price per square meter	3,821.67
Price per square meter after rounding	3,850

Comparison data source: Ministry of Justice indicators, real estate brokers and real estate websites.

The value of the property by calculating the value of the land and buildings "cost calculation method":

Statement	Area (square meter)
Land area	2,309.76
Building area	5,422.98
Price per square meter of land	3,850
Building price per square meter	1,600
age of buildings	9
Building price per square meter (after deducting depreciation)	1,240
total land value	8,892,576
Total Building Value	6,724,495
Total property value at cost	15,617,071

- The area of the land was calculated based on the attached instrument.
- The building areas were calculated according to the attached building permit.

The value of the property by calculating the income return "income capitalization method":

Gross annual income (before deduction of occupancy rate)	960,000
Average annual occupancy rate	5%
Total annual income (after deducting occupancy rate)	912,000
Management, operation and maintenance expenses (0%) of the total income (after deducting the occupancy rate)	91,200
net income of the property	820,800
Income capitalization factor	6.00%
The value of the property using the method of calculating the return on income	13,680,000

- The total real estate income was calculated according to the field survey that was conducted on similar properties, knowing that the rental value according to the contracts attached by the client is close to the rental price in the current situation of the real estate market.
- The capitalization factor was calculated after analyzing the market risks and available options and studying the percentage of returns for similar projects, which ranges from 5.50% to 6.50%.
- Operation and maintenance expenses according to the attached contract shall be borne by the lessee.

Estimating the market value of the property:

When reviewing the previous information from this report and analyzing the current real estate market data, we estimate the market value of the property (cost method) on 06/30/2021 AD, and its current status according to the following table:
